SECOND YR.B.ARCH. REPEATER EXAM –JULY,2010
SUBJECT : T.O.S.

DATE : 12 /7/2010

HRS: 3

MARKS:100

- Note: 1. All questions carry equal marks, 16 marks each.
2. Four marks are reserved for neat sketches.
3. Solve any three questions from each section.
4. Split questions are not allowed. Full question has to be attempted at one place.

SECTION-I

- Q.1. (a) Why de-watering is necessary before foundation. State the methods of de-watering and explain any one method.
(b) Write a note, with neat sketch, about test in accessing the load bearing capacity of soil.
- Q.2. A fixed beam AB has 10.0m span. The beam carries four point loads as shown in Fig.I. Find Fixed End Moments at A & B and draw Bending Moment Diagram and Shear Force Diagram.
- Q.3. A continuous beam ABCD has simple supports at A & D. The loads on the beam are as shown in Fig.II. Find the moments at A,B,C & D and draw Shear Force and Bending Moment Diagram. Use the moment distribution method only.
- Q.4. A steel beam, simply supported and with 6.0m span, carries a point load of 50KN, at 1.2m from left end. If $EI = 14 \times 10^{12} \text{Nmm}^2$, find the distance of maximum deflection from left end and also find maximum deflection.
- Q.5. The cross section of a column is as shown in Fig.III. There is an eccentric load acting as shown in Fig.III. Find stresses at all corners. What additional load is required for no tension in any corner. Find the new stresses due to these two loads together.
