QP Code :3480

*Question .1 is compulsory.**Time: 3 hours**Solve any three questions from the remaining.**Marks: 80**Marks are indicated on the right.*

- 
- Q.1** Answer **any four** from the following: 20
- Discuss the allotropic modifications of pure Iron.
  - Define fracture and discuss various types of fracture.
  - What are dislocations? Classify them and discuss any one of them.
  - What is nitriding? How is it practised?
  - What are composites? Give a classification of composites.
- Q.2**
- What is deformation? Explain the slip mode of deformation. 7
  - Define Fatigue. Draw the S-N curve and explain its interpretation. 7
  - Derive an expression for CRSS. 6
- Q.3**
- Draw a neat and labeled Fe-Fe<sub>3</sub>C diagram. 7
  - Discuss the cooling of 0.4 % C steel. 6
  - Explain the method of carburizing; also give examples of parts that are carburized. 7
- Q.4**
- State Griffith's criteria of brittle fracture and derive the equation. 7
  - Draw neat and labelled microstructures of grey cast iron, 0.8% C steel and low carbon steel. 7
  - Define Hardenability and discuss factors affecting it. 6
- Q.5**
- What are the various methods used for processing of polymers? Explain any one in detail. 7
  - What are High speed steels? How are they heat treated? 7
  - How are stainless steels classified? Discuss their properties and applications. 6
- Q.6** Write short notes on **any four**: 20
- Recrystallisation annealing
  - Stages of Creep
  - Methods used for nanomaterials synthesis
  - TTT diagram and its importance
  - Types of Cast irons.
