

3

Q.P.Code: 11346

(Old Course)

(3 Hours)

[Total Marks: 100

Instructions:

- 1) Question 1 is compulsory.
- 2) Solve any four questions out of remaining six questions.
- 3) Use of statistical table is permitted.

Q.1 a) Evaluate  $\int_0^{1+i} (x^2 + iy) dz$  along the path  $y = x$ . 5

b) If the tangent of the angle made by the line of regression of  $y$  on  $x$  is  $0.6$  and  $\sigma_y = 2\sigma_x$ , find the correlation coefficient between  $x$  and  $y$ . 5

c) Discrete random variable has p. d. f. given below 5

x	-2	-1	0	1	2	3
P(x)	0.1	0.1	0.2	0.2	0.3	0.1

Find mean and variance.

d) The life time of a certain brand of electric bulb may be considered a random variable with mean 1200 hours and standard deviation 250 hours. Using the Central limit theorem find the probability that the average lifetime of 60 bulbs exceeds 1250 hrs. 5

Q.2 a) Using Residue theorem evaluate  $\oint_C \frac{e^{2z}}{(z - \pi i)^3} dz$ , where  $C$  is  $|z-2i| = 2$  6

b) In a normal distribution 7% items are under 35 and 89% are under 63. Find the mean and standard deviation. 6

c) Verify Gauss's Divergence theorem for  $\vec{F} = 4x\mathbf{i} - 2y^2\mathbf{j} + z^2\mathbf{k}$  taken over the region bounded by  $x^2+y^2=4, z=0, z=3$  8

(2)

Q. 3 a) A continuous random variable  $x$  has probability distribution function 6

$f(x) = A + Bx$ , when  $0 \leq x \leq 1$ . If the mean of the distribution is  $1/3$ , find  $A$  and  $B$ .

b) Samples of two types of electric bulbs were tested for length of life and the following data were obtained. 6

	Type I	Type II
Number of samples	8	7
Mean of the samples (in hours)	1210	1314
Standard deviation (in hours)	36	42

Test at 5% level of significance whether the difference in the sample means is significant.

c) By using Stoke's theorem evaluate  $\int_C [(x^2 + y^2)i + (x^2 - y^2)j] \cdot d\vec{r}$  where  $C$  is 8

the boundary of the region enclosed by circles  $x^2 + y^2 = 4$ ,  $x^2 + y^2 = 16$ .

Q4. a) Determine the poles and find the residue at each pole  $\frac{z^2 + 1}{(z^2 - 1)(z^2 + 4)}$  6

b) The average of marks scored by 32 boys is 72 with standard deviation 8 while that of 36 girls is 70 with standard deviation 6. Test at 1% level of significance whether the boys perform better than the girls. 6

c) Find the coefficient of correlation between  $x$  and  $y$  for the following data 8

x	98	101	104	107	113	120	125	128
y	65	65	67	68	68	69	68	68

Q.5 a) Find Laurent's series which represents the function  $f(z) = \frac{z - 1}{(z^2 - 2z - 3)}$  6

indicating regions of convergence.

[Turn over

(3)

b) The regression lines of a sample are  $x + 6y = 6$ , and  $3x + 2y = 10$ . Find 6

i) Sample means  $\bar{x}$  and  $\bar{y}$  (ii) coefficient of correlation between  $x$  and  $y$ .

Also estimate  $y$  when  $x = 12$ .

c) Verify Green's theorem in the plane for  $\oint (x^2 - y)dx + (2y^2 + x)dy$  around the 8  
boundary of the region defined by  $y = 4$  and  $y = x^2$ .

Q.6 a) Fit a Poisson distribution to the following data. 6

X :	0	1	2	3	4
Frequency:	123	59	14	3	1

b) Evaluate  $\int_0^{2\pi} \frac{1}{5 + 3 \sin \theta} d\theta$  6

c) In an experiment on immunization of cattle from Tuberculosis the following results 8  
were obtained.

	Affected	Not affected	Total
Inoculated	2	10	12
Not inoculated	8	4	12
Total	10	14	24

Use Chi-square test to determine the efficiency of vaccine in preventing tuberculosis.

Q7. a) Evaluate  $\int_c \frac{\sin \pi z^2 + \cos \pi z^2}{(z-2)(z-3)} dz$ , where  $c$  is the circle and  $|z| = 4$  6

b) The probability of that a man aged 60 will live up to 70 is 0.65. What is the 6  
probability that out of 10 such men now at 60 at least 7 will live up to 70 ?

c) A vector field  $\vec{F}$  is given by  $\vec{F} = (ye^{xy} \cos z)i + (xe^{xy} \cos z)j - (e^{xy} \sin z)k$  8

Prove that it is irrotational and hence find its scalar potential.

OLD COURSE

Time : 3Hrs

Marks : 100

N.B.: (1) Question No.1 is compulsory.

(2) Attempt any **Four** questions out of **remaining** questions.

(3) Assume suitable **data** if required but **justify** the same

Q. 1

**Attempt any four**

(20)

- (a) Explain the principle of superposition with example.
- (b) What is meant by conjugate beam? State the Mohr's Theorem no I & II as applied to the conjugate beam.
- (c) Define ILD and explain its importance in Structural analysis
- (d) Explain function of each component of suspension bridge consisting of suspension cable and three hinged stiffening girder.
- (e) Explain the concept of unsymmetrical bending. Also state the condition where unsymmetrical bending in flexural members can occur.

Q. 2

- (a) Using moment area method, determine the vertical deflection and slope at free end of the beam as shown in fig. (10)

- (b) Determine slope and deflection at C in the overhanging beam ABC as shown in fig below. Take  $E = 2 \times 10^5 \text{ N/mm}^2$   $I = 100 \times 10^6 \text{ mm}^4$  (10)

Turn Over

- Q.3 (a) Analyse the rigid jointed frame shown in fig. Draw Free Body Diagram of each member separately and construct AFD, SFD, BMD for the same. (14)

- Q.3 (b) A symmetrical cable of span 100m with central dip 15m is loaded with UDL of 30kN/m. Find the maximum and minimum tension in the cable. (06)

- Q.4 (a) Figure shows the cross section of a T beam with its CG 41.207mm below the top surface AB. The c/s is subjected to sagging bending moment of 8kNm acting in plane as shown in figure. Find the maximum compressive and tensile stresses induced in c/s. Also locate the neutral axis position. (10)

Turn Over

- (b) For the pin jointed plane frame as shown in figure, calculate vertical deflection of point D as shown in figure. (10)

- Q. 5 (a) Find the vertical deflection of the truss shown in figure at the joint C. Cross-sectional areas in  $\text{mm}^2$  of all the members are shown in figure. (10)

Take  $E = 2 \times 10^5 \text{ N/mm}^2$ .

- Q. 5 (b) Draw ILD for members 4, 5 and 6 of truss shown in fig. Assume that the load (10)

Turn Over

moves along the bottom chord.

Q.6 (a)

(12)

A three hinged symmetrical parabolic arch is loaded as shown in figure. Calculate: i) Support Reaction ii) Maximum bending moment in the portion AC and BC (Draw neat sketch). iii) Normal thrust and radial SF at D.

- (b) A column of hollow circular section with 200mm external diameter and 100mm internal diameter is of length 4m. The column is pinned at both ends. The column carries a load of 100kN at an eccentricity of 40mm. Find the stresses produced at extreme fibre of the column section. Take  $E=200\text{Gpa}$ . (08)

Q.7 (a) The load shown in fig moves from left to right on a girder of span 10m find (10)

Turn Over

the absolute max. BM for the girder.

- Q.7 (b) The cable of a suspension bridge has a span of  $50\text{ m}$  and a central dip of  $6.25\text{ m}$ . (10)  
 Each cable is stiffened by a girder hinged at ends at mid span. There is a uniform dead load of  $10\text{ kN/m}$  over the whole girder and in addition a live load of  $32\text{ kN/m}$ ,  $12\text{ m}$  long. Find the maximum cable tension when the live load is situated on the half of stiffening girder with its right end over the central hinge.
