[TURN OVER]

8) i) $\int_{2\pi}^{2\pi} \frac{d\theta}{2 + \cos \theta}$
 ii) $\int_0^{\infty} \frac{dx}{x^2 + 1}$

c) Using Residue theorem, evaluate

6) $u(0,t) = 0, u(5,t) = 0, u(x,0) = x^2(25 - x^2)$ taking $h = 1$, for 3 minutes.

b) Using Bender-Schmidt method, solve $\frac{\partial^2 u}{\partial x^2} - \frac{\partial u}{\partial t} = 0$, subject to the conditions,

3. a) If $v = e^x \sin y$, prove that v is a harmonic function. Also find the corresponding
harmonic conjugate function and analytic function.

8) Find the bilinear transformation which maps the points $z = 1, i, -1$, onto the
points $w = i, 0, -i$. Hence, find the image of $|z| < 1$ onto the w -plane.

6) Obtain Fourier series of $f(x) = |x|$ in $(-\pi, \pi)$

$$F(s) = \frac{(s^2 + 9)(s^2 + 4)}{1}$$

6) a) Using convolution theorem, find the inverse Laplace transform of

5) d) Evaluate $\int_C (z^2 - 2z + 1) dz$ where C is the circle $|z| = 1$.

5) c) The equations of lines of regression are $x + 2y = 5$ and $2x + 3y = -8$.
Find i) means of x and y , ii) coefficient of correlation between x and y .

5) b) Show that the set of functions $\cos nx, n = 1, 2, 3, \dots$ is orthogonal on $(0, 2\pi)$.

5) 1. a) Find Laplace transform of $f(t) = e^{-t} \sin t, \cos 2t$.

3) Figures to the right indicate full marks

2) Answer any Three from remaining

N.B. 1) Question No. 1 is compulsory.

[Total marks: 80] (3 hours)

- b) Fit a straight line to the following data,

6

- a) Obtain Complex form of Fourier series of $f(x) = e^x$, $-1 < x < 1$

8

$$\text{Parseval's identity, deduce that -}$$

$$\frac{96}{\pi^4} = \frac{1}{1} + \frac{1}{3} + \frac{1}{5} + \dots$$

c) Obtain half range Fourier cosine series of $f(x) = x$, $0 < x < 2$. Using

9

- b) Find the Laplace transform of $\sin at$. Does the L.T. of $\cos at$ exist?

9

$$u = e^{-x} \{ (x^2 - y^2) \cos y + 2xy \sin y \}$$

6

- a) Find an analytic function $f(z) = u + iv$, if

8

- c) Solve $(D^2 - 3D + 2)y = 4e^{2t}$ with $y(0) = -3$, $y'(0) = 5$ where $D \equiv \frac{dy}{dt}$

6

$$f(z) = \frac{(z-1)(z-2)}{z} \text{ in the regions, i) } |z| < 1 \quad \text{ii) } 1 < |z| < 2$$

6

- b) Obtain the Taylor's and Laurent series which represent the function

6

- $u(0, t) = 0$, $u(1, t) = 2t$, $u(x, 0) = 0$ taking $h = 0.25$ for two-time steps.

$$4. a) \text{Solve by Crank-Nicholson simplified formula } \frac{\partial^2 u}{\partial x^2} - \frac{\partial u}{\partial t} = 0,$$

- N.B.: (1) Question No. 1 is compulsory.
- Q.P. Code: 39992
1. Attempt any four out of the following
 (a) State Kelvin-Planck statement and Clausius statement of the second law of thermodynamics.
 (b) Draw a neat diagram of Roots blower and explain its working.
 (c) Show that energy is property of a system.
 (d) Draw a simple schematic diagram of a thermal power plant with one reheat. Also represent this on T-S diagram.
 (e) Define dryness fraction, saturation temperature, work ratio and specific steam consumption.
2. (a) Steam enters a nozzle at a pressure of 7 bar and 200°C with an initial enthalpy of 2850 kJ/kg and leaves at a pressure of 1.5 bar. The initial velocity of steam at the entrance is 40 m/s and the exit velocity from the nozzle is 700 m/s . The mass flow rate through the nozzle is 1400 kg/hr , the heat loss from the nozzle is 11705 kJ/hr . Find the final enthalpy of steam and the nozzle area at exit if the specific volume at exit is $1.24 \text{ m}^3/\text{kg}$.
3. (a) A heat engine is used to drive a heat pump. The heat transfers from the heat engine and the heat pump are used to heat the water circulating through the radiators of a building. The efficiency of the heat engine is 27% and the COP of the heat pump is 4. Evaluate the ratio of the heat transfer to the water to the heat transfer to the heat engine.
4. In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar, determine the pump work, turbine work, condenser heat flow and Rankine efficiency.
5. (a) What do you understand by multistage compression? What are its merits over single stage compression?
6. (a) 0.06 m^3 of air at 5 bar and 200°C expands isentropically until the pressure becomes 2 bar. It is then heated at constant pressure until the enthalpy increases during this process is 80 kJ. Calculate the work done in each process and the total work done.
7. (a) Dual cycle for the same compression ratio and the same heat rejection.
 (b) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.
8. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.
9. (a) State and prove Clausius theorem.
 (b) Write Maxwell's equations.
 (c) State and prove Clausius theorem.
10. (a) 0.06 m^3 of air at 5 bar and 200°C expands isentropically until the pressure becomes 2 bar. It is then heated at constant pressure until the enthalpy increases during this process is 80 kJ. Calculate the work done in each process and the total work done.

(4) Use of Steam Table and Mollier diagram is permitted.

(3) Assume suitable data if required and state it clearly.

(2) Solve any three out of the remaining five questions.

(1) Use of Stream Table and Mollier diagram is permitted.

1. Attempt any four out of the following
 (a) State Kelvin-Planck statement and Clausius statement of the second law of thermodynamics.

(b) Draw a neat diagram of Roots blower and explain its working.

(c) Show that energy is property of a system.

(d) Draw a simple schematic diagram of a thermal power plant with one reheat. Also represent this on T-S diagram.

(e) Define dryness fraction, saturation temperature, work ratio and specific steam consumption.

2. (a) Steam enters a nozzle at a pressure of 7 bar and 200°C with an initial enthalpy of 2850 kJ/kg and leaves at a pressure of 1.5 bar. The initial velocity of steam at the entrance is 40 m/s and the exit velocity from the nozzle is 700 m/s . The mass flow rate through the nozzle is 1400 kg/hr , the heat loss from the nozzle is 11705 kJ/hr . Find the final enthalpy of steam and the nozzle area at exit if the specific volume at exit is $1.24 \text{ m}^3/\text{kg}$.

3. (a) A heat engine is used to drive a heat pump. The heat transfers from the heat engine and the heat pump are used to heat the water circulating through the radiators of a building. The efficiency of the heat engine is 27% and the COP of the heat pump is 4. Evaluate the ratio of the heat transfer to the water to the heat transfer to the heat engine.

4. In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

5. (a) What do you understand by multistage compression? What are its merits over single stage compression?

6. (a) 0.06 m^3 of air at 5 bar and 200°C expands isentropically until the pressure becomes 2 bar. It is then heated at constant pressure until the enthalpy increases during this process is 80 kJ. Calculate the work done in each process and the total work done.

7. (a) Dual cycle for the same compression ratio and the same heat rejection.

8. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

9. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

10. (a) State and prove Clausius theorem.

(b) Write Maxwell's equations.

(c) State and prove Clausius theorem.

(d) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

(e) 0.06 m^3 of air at 5 bar and 200°C expands isentropically until the pressure becomes 2 bar. It is then heated at constant pressure until the enthalpy increases during this process is 80 kJ. Calculate the work done in each process and the total work done.

11. (a) Dual cycle for the same compression ratio and the same heat rejection.

12. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

13. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

14. (a) State and prove Clausius theorem.

15. (a) Dual cycle for the same compression ratio and the same heat rejection.

16. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

17. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

18. (a) State and prove Clausius theorem.

19. (a) Dual cycle for the same compression ratio and the same heat rejection.

20. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

21. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

22. (a) State and prove Clausius theorem.

23. (a) Dual cycle for the same compression ratio and the same heat rejection.

24. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

25. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

26. (a) State and prove Clausius theorem.

27. (a) Dual cycle for the same compression ratio and the same heat rejection.

28. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

29. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

30. (a) State and prove Clausius theorem.

31. (a) Dual cycle for the same compression ratio and the same heat rejection.

32. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

33. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

34. (a) State and prove Clausius theorem.

35. (a) Dual cycle for the same compression ratio and the same heat rejection.

36. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

37. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

38. (a) State and prove Clausius theorem.

39. (a) Dual cycle for the same compression ratio and the same heat rejection.

40. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

41. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

42. (a) State and prove Clausius theorem.

43. (a) Dual cycle for the same compression ratio and the same heat rejection.

44. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

45. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

46. (a) State and prove Clausius theorem.

47. (a) Dual cycle for the same compression ratio and the same heat rejection.

48. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

49. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

50. (a) State and prove Clausius theorem.

51. (a) Dual cycle for the same compression ratio and the same heat rejection.

52. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

53. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

54. (a) State and prove Clausius theorem.

55. (a) Dual cycle for the same compression ratio and the same heat rejection.

56. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

57. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

58. (a) State and prove Clausius theorem.

59. (a) Dual cycle for the same compression ratio and the same heat rejection.

60. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

61. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

62. (a) State and prove Clausius theorem.

63. (a) Dual cycle for the same compression ratio and the same heat rejection.

64. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

65. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

66. (a) State and prove Clausius theorem.

67. (a) Dual cycle for the same compression ratio and the same heat rejection.

68. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

69. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

70. (a) State and prove Clausius theorem.

71. (a) Dual cycle for the same compression ratio and the same heat rejection.

72. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

73. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

74. (a) State and prove Clausius theorem.

75. (a) Dual cycle for the same compression ratio and the same heat rejection.

76. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

77. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

78. (a) State and prove Clausius theorem.

79. (a) Dual cycle for the same compression ratio and the same heat rejection.

80. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

81. (a) In a Rankine cycle the stream at the inlet to the turbine is at 100 bar and 500°C . If the exhaust pressure is 0.5 bar , determine the pump work, turbine work, condenser heat flow and Rankine efficiency.

82. (a) State and prove Clausius theorem.

83. (a) Dual cycle for the same compression ratio and the same heat rejection.

84. (a) With the help of P-V and T-S diagram, compare the efficiencies of Otto, Diesel and Dual cycle.

85. (a) In a Rankine cycle the stream at the inlet to the turbine is at 10

6. (a) Derive an expression of air standard efficiency for diesel cycle.
- (b) In an I.C. engine operating on the dual cycle, the temperature of the working fluid (air) at the beginning of the compression is 27°C . The ratio of the maximum and minimum pressures of the cycle is 70 and compression ratio is 15. The amounts of heat added at constant volume and constant pressure are equal. Compute the air standard thermal efficiency of the cycle.
6. (b) A single stage reciprocating air compressor has a swept volume of 2000 cm^3 and runs at 800 rpm. It operates on a pressure ratio of 8, with a clearance of 5% of the swept volume. Assume NTP room conditions and at inlet ($p = 101.3 \text{ kPa}, T = 15^\circ\text{C}$) and polytropic compression and expansion with $n = 1.25$. Calculate:
- (a) Indicated power
 - (b) Volumetric efficiency
 - (c) Mass flow rate
 - (d) Free air delivery
 - (e) Isothermal efficiency, and
 - (f) The actual power needed to drive the air compressor, if the mechanical efficiency is 85%.
- 10 10

TURN OVER

I

- i. Magnitude and the direction of principal stresses shear stress is maximum
- ii. Magnitude of the normal and the shear stresses on a plane, on which the tensile stress of 105 N/mm^2 , compressive stress of 35 N/mm^2 and shear stress of 70 N/mm^2 . Find graphically or otherwise.
- III a. Two mutually perpendicular planes of an element of material are subjected to tensile stress of 105 N/mm^2 , compressive stress of 35 N/mm^2 and shear stress of 70 N/mm^2 . Find graphically or otherwise.
- b. A point load of 10 kN applied to a simply supported beam at mid-span, produces a deflection of 6 mm and a maximum bending stress of 20 N/mm^2 . Calculate the maximum value of the momentary stress produced, when a weight of 5 kN is allowed to fall through a height of 18 m on the beam at the middle of the span.
- c. A cantilever of length 4 m carries uniformly varying load of intensities zero at free end and 2 KN/m at fixed end. Draw shears force and bending moment diagrams for the beam.
- d. Find the maximum shear stress induced in a solid circular shaft of diameter 150 mm , when it transmits 150 KW power at 180 rpm .
- e. A steel bar of $50 \text{ mm} \times 50 \text{ mm}$ in section and 3 m length is subjected to an axial pull of 140 N . Calculate the strain energy stored in the bar. Find also the extension of the bar. Take $E = 200 \text{ GPa}$
- II a. A compound tube consists of a steel tube of 140 mm internal diameter and 160 mm external diameter, and an outer brass tube of 160 mm internal diameter and 180 mm external diameter. Both the two tubes are of 1.5 m length. If the compound tube carries an axial compressive load of 900 KN , find its reduction in length. Also, find the stresses and the loads carried by each tube.
- b. A point load of 10 kN applied to a simply supported beam at mid-span, produces a deflection of 6 mm and a maximum bending stress of 20 N/mm^2 .
- c. A beam of length 4 m carries uniformly varying load of intensities zero at free end and 2 KN/m at fixed end. Draw shears force and bending moment diagrams for the beam.
- d. Define bulk modulus. Derive an expression for Young's modulus, in terms of bulk modulus and Poisson's Ratio.
- e. State the assumptions in the theory of pure bending and derive the formula.
- f. A short column of external diameter 400 mm and internal diameter 200 mm carries an eccentric load of 80 KN . Find the greatest eccentricity, which the load can have without producing tension on the cross section.
- g. Define bulk modulus. Derive an expression for Young's modulus, in terms of bulk modulus and Poisson's Ratio.
- h. Answer any four of the following.

- Q1 is compulsory. Answer any three from the remaining five questions.
- Assume suitable data, wherever required.
- State the assumptions and justify the same.
- Illustrate answers with sketches, wherever required.
- Write legibly with blue or black ink pen. Use pencil only to draw diagrams and graphs.

(Three Hours)

QP CODE : 27637

Marks 80

22/5/18

SE-Structural - Choice Based - Model - 50m

14

-----2-----

- b. A simply supported beam carries a UDL of intensity 2.5 kN/m over a span of [10] section of the beam. Also, draw the shear stress distribution diagram for $175 \text{ mm} \times 25 \text{ mm}$. Calculate maximum bending stress and shear stress for the 5 m . The cross-section is T-section having flange $125 \text{ mm} \times 25 \text{ mm}$ and web 5 m . The safe Rankine load.

- VI. a. A hollow cast iron column of 200 mm extremal diameter, 150 mm internal [10/1600], taking factor of safety as 6, $\sigma_c = 560 \text{ N/mm}^2$, $a = \frac{1}{1600}$, determine the load.

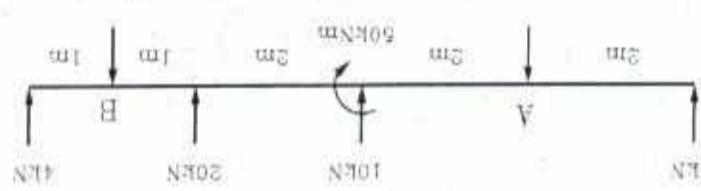

$$E = 2.1 \times 10^5 \text{ N/mm}^2, \quad \frac{1}{m} = 0.286$$

- b. A closed cylindrical vessel made of steel plates 4 mm thick with plane ends [10] carries fluid under a pressure of 3 N/mm^2 . The diameter of the cylinder is 250 mm and the length is 750 mm . Calculate the longitudinal and hoop stresses in the cylinder wall and determine the changes in diameter, length and volume of the cylinder.

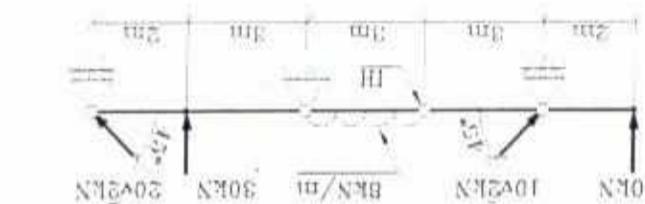

- V. a. A hollow shaft, having an extremal diameter 40% of its extremal diameter, [10] transmits 562.5 kW power at 100 rpm . Determine extremal diameter of the shaft, if shear stress is not to exceed 60 N/mm^2 , and the twist in a length of 2.5 m should not exceed 1.3° . Assume that the maximum torque is 1.25 times the mean torque and $G = 9 \times 10^4 \text{ N/mm}^2$.

- b. A weight of 200 kN is supported by three adjustable short pillars in a row, each [10] 500 mm^2 in section. The central pillar is made of steel and the outer ones are of copper. The pillars are adjusted such that at 15°C , each carries equal load. The temperature is then raised to 115°C . Estimate the stresses in each pillar at 15°C and 115°C . Take: $E_s = 2 \times 10^5 \text{ N/mm}^2$, $E_c = 0.8 \times 10^5 \text{ N/mm}^2$, $\alpha_s = 1.2 \times 10^{-5}/^\circ\text{C}$.

- IV. a. Determine the position and the amount of maximum deflection for the beam [10] shown in the figure. Take, $EI = 1.8 \times 10^4 \text{ kNm}^2$.

- b. Draw axial force, shear force and bending moment diagrams for the beam [10]

- b. Draw axial force, shear force and bending moment diagrams for the beam [10] loaded as shown in figure. Locate all important points.

QP CODE : 27637

- Q1 Attempt any four of the following [20]
- Attempt any four of the following [20]
 - Describe automatic machines.
 - What is thread rolling?
 - How are seamless tubes manufactured?
 - Explain explosive welding
 - Differentiate between arc welding and electron beam welding.
 - Explain gas cutting operation.
 - Discuss its advantages, limitations and working of laser beam welding. Also
 - With a neat sketch explain the principle and working of laser beam welding. Also
 - Compare thermoplastics and thermosetting plastics.
 - Explain blow moulding process with a neat sketch.
 - What is riser? Discuss its types and application.
 - Describe types of drilling machines and their application.
 - a. Discuss various defects found in welding.
 - b. Define weldability and describe the factors affecting it.
 - c. Differentiate between hot working and cold working processes.
 - a. What are the constituents of moulding sand? Discuss their function.
 - b. Describe machine operations performed on lathe machine.
 - c. Define the terms 'Spread', 'Elongation' and 'Draft' with respect to rolling process.

N.B. a. Question no. 1 is compulsory.
 b. Attempt any three questions out of remaining five questions
 c. Figures to right indicates full marks

- Q. 1 Write notes on any four:- (5x4=20)
- (a) Smart materials
 (b) Creep Test
 (c) Effect of Alloying elements on properties of steel.
 (d) Critical resolved shear stress
 (e) Classification of Stainless steels
- Q. 2 What do you understand by Composite materials? Explain their properties and applications. (10)
- Q. 3 Draw Fe-Fe₃C Diagram and Explain cooling of 0.9 % C alloy in the Fe-Fe₃C Diagram. How are dislocations regenerated at Frank Read Source? Explain with neat diagram. (10)
- Q. 4 (a) Draw and explain construction of Time Temperature transformation (TTT) diagram. Also indicate various cooling patterns on the diagram.
 (b) Derive an expression for Griffith theory of brittle fracture. Explain Orowan's Modification. (10)
- Q. 5 (a) Explain slip and twin mechanism of plastic deformation. (10)
 (b) Classify Crystal Imperfections. Distinguish between Edge and Screw dislocation. (10)
- Q. 6 Write short notes on any four (5x4=20)
- (a) Hardenability test
 (b) Martempering
 (c) Synthesis of Nanomaterials
 (d) Recrystallisation annealing
 (e) Rule of mixtures for composites

N.B. 1) Question No. 1 is compulsory.
 2) Attempt any three questions from remaining five questions.
 3) Figures at right indicate marks.

Time: 3 hours Marks: 80
