About the Programme:

Architecture is the art and science of designing buildings and structures. A wider meaning would include within this scope the design of any built environment, structure or object, from town planning, urban design, and landscape architecture to furniture and objects. Doing architecture requires strong technical knowledge in the fields of engineering, logistics, geometry, building techniques, functional design and ergonomics. It also requires a certain sensibility to arts and aesthetics. Finally, it also requires a preoccupation for human questions and society's problems. Architecture is a very broad and humanistic field that is at the same time technical, artistic and social.
