

Mahatma Education Society's
PILLAIS' COLLEGE OF ARCHITECTURE
Sector-16, Plot No.10, New Panvel – 410 206

SECOND YR.B.ARCH. ANNUAL EXAM: APRIL, 2009
SUBJECT : T.O.S.

DATE : 6/4/2009

HRS: 3

MARKS:100

- Note: 1. Solve any three questions from each section.
2. Q.1 & Q.6, carry 18 marks; all other questions carry 16 marks each.
3. Sketches are essential.

SECTION – I

- Q.1. (a) Write a note on various types of foundations and draw sketches. (9)
(b) Why is de-watering of water from soil is necessary before construction?
State the methods of dewatering and explain any one method with sketches. (9)
- Q.2. A fixed beam AB is loaded as shown in Fig.I. Find the Fixed End Moments at A & B; reactions at A & B and draw the B.M. & S.F. Diagrams giving values at important points.
- Q.3. A continuous beam ABCD is loaded as shown in Fig.II. Find the moments at A, B, C & D. Find the reactions at A, B, C & D. Use the method of Theorem of Three Moments.
- Q.4. Solve the problem mentioned in question three by Moment Distribution Method. Draw the S.F. Diagram and B.M. Diagram; giving values at important points.
- Q.5. A hollow circular tube, used as column, has outer diameter 200mm and thickness as 20mm. The length of the column is 5m with both ends hinged. If $E = 1 \times 10^5 \text{ N/mm}^2$, $f_c = 550$ and $a = \frac{1}{1600}$
find the load carried by the column using – i) Euler's Formula and ii) Rankine's Formula.
